

BALLUFF precision switchgear are used to

- Control
- Automate
- Monitor and
- Meter

work sequences and cycles in relation to a given machine movement.

Two independently rotating cam rings (for each switching point) make it possible to smoothly adjust the pulse duration (switch-on and switch-off points) as well as the pulse position (0 to 360°).

BALLUFF precision switchgear operates on

- Presses
- Punches
- Forging presses
- Steel plate machines
- Welding machines
- Machine tools
- Packaging machines
- Assembly machines

- Transfer lines
- Transportation plants
- Hoists
- Lifts
- Construction machines
- Mining plant and machinery
- Steelworks

as well as in the

- Automobile industry.
